

The Binocular-Specialists!

STEINER 
GERMANY

STEINER – Expertise focused on binoculars.
Uncompromising in quality and ruggedness.

STEINER – Welcome to the global market leaders!

Over 60 years of specialized experience guarantee top-quality at the highest level.

“When it comes to binoculars, we will not be outdone by anyone in the world!”

A comment made by Carl Steiner. “For over 60 years we have set ourselves the task of developing binoculars that provide our customers with unique experiences.

No matter where you are in the world or what you are doing, this is a great challenge and is extremely demanding. It has fascinated us for decades and acts as a source of inspiration every day.

This is why we have built up networks over the years, allowing us to communicate and exchange ideas with users of binoculars from all over the globe. As the world’s only company to solely specialize in the manufacture of professional binoculars, we have acquired a unique appreciation for the needs of our customers.

It is this appreciation, combined with our experience and the expertise of our highly qualified development team that has helped us in recent years to even surpass our own extremely high quality standards in some market segments.

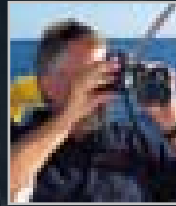

It is part of STEINER’s philosophy that the highly demanding manufacturing process of top-quality lenses can only be achieved by combining professional skills with personal identification of the products. That is why the passion for perfection of our highly motivated specialist staff can be felt in every single pair of STEINER binoculars.

We build binoculars with conviction and always strive to offer both professionals and discerning hobbyists the best possible model for their needs. This is why we are constantly engaged in developing new and innovative binoculars also in the future.

Carl Steiner

STEINER Marine Binoculars.

Unparalleled top quality from the global market leaders.

"As an experienced yachtsman I know how important reliable binoculars are as part of a well-equipped yacht. In particular, when I have to look for navigational aids at sea or if I want to look at something more closely from a distance. With my new STEINER Commander_{XP} all objects on the water appear even sharper and clearer. This is decisive for the safety of my crew as well as myself, particularly when visibility is poor or when it is getting dark. The premium class of the Commander_{XP} is rounded off by the excellent compass with its precision reticle.

Even during the worst experience of my life at sea, my Commander_{XP} ensured that I got home safely: We were coming from the North, sailing for Aeroskobing. Without prior warning a storm suddenly blew up in the early afternoon. Visibility deteriorated so abruptly and the wind became so strong that we could not even see the buoys which were right next to our boat with the naked eye.

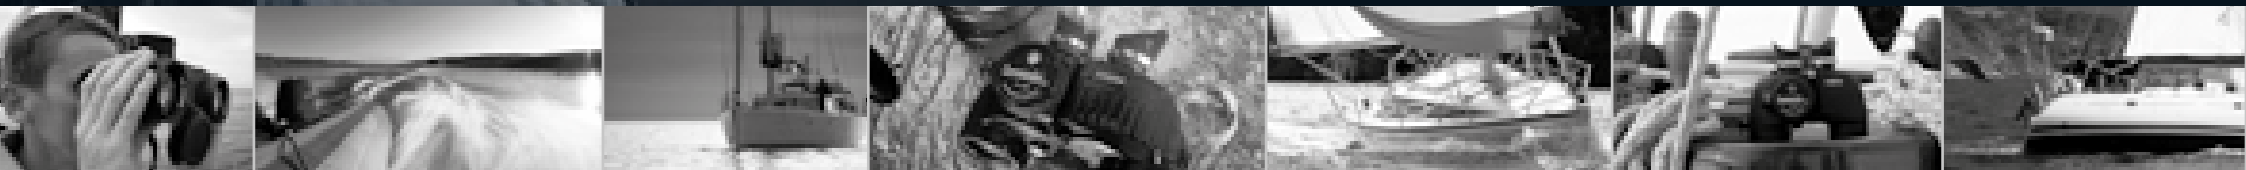

Luckily the Commander_{XP} has been designed for just such occasions, and we were easily able to find our way even under such adverse weather conditions. As far as my wife and I are concerned, STEINER binoculars offer just that little bit of extra safety that we want when out sailing."

Helmut Becker, Yachtsman.

We at STEINER-OPTIK, inventors of the compass binoculars, have been focusing our whole attention on developing binoculars since 1947. Only the best is good enough for us, and we are constantly engaged in further development. For us standing still means a step backwards.

It is only through such passionate love for our products that we can master new challenges and come up with meaningful innovations for our binoculars. We know what demands water sports make on binoculars. For us it is, therefore, important to achieve synergy effects gleaned from theory and practice. Besides the specialists at STEINER, our production teams always include water sports enthusiasts. They pass their experiences and suggestions on to us.

For the Volvo Ocean Race, the world's toughest regatta, all teams once again opted for a STEINER CommanderXP as their binoculars. This race also provided us with valuable feedback that was incorporated into our developments. The features of our binoculars are unbeatable: precision and ruggedness, High-Definition XP-Optics, Nano-Protection® that ensures salt water runs straight off the objectives, the generously dimensioned compass and the non-slip, shock-absorbing NBR-Longlife rubber armouring. This high standard does not only convince hobby yachtsmen but also professional merchant sailors throughout the world. The clever technical details, the ease of handling, the ergonomic design of each of the binoculars and the optical performance are simply guaranteed to impress.

STEINER Hunting Binoculars.

Your passion is our inspiration.

The Binocular-Specialists!

STEINER 
GERMANY

"Hunting is a law unto itself. You never know what's going to happen next. Things may happen all at once or change from one moment to the next.

That is why it is so essential for hunters to be able to rely on their equipment to a 100%, whereby the binoculars play a major role. They act as the eyes of the hunter, providing him with visual information that he needs if he is to make decisions in fractions of a second.

STEINER offers me top-class binoculars for every type of hunt that are unrivalled in quality. Whether with roof or Porro prisms, they leave nothing to be desired in terms of brilliant optics, perfect ergonomics and extreme ruggedness! Whenever I reach for my STEINER binoculars, I feel the result of non-compromising specialization.

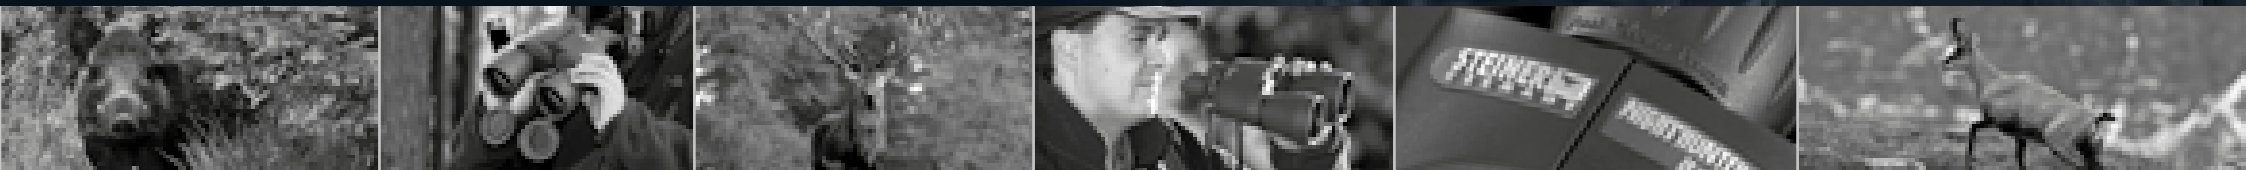

The Nighthunter_{xp} model in particular has done me sterling service for years when out at night watching wild boars from the hide, thanks to its extreme luminosity and high contrast. I find it especially convenient that refocusing isn't necessary. The Nighthunter_{xp} satisfies every demand I make on high-quality binoculars for hunting at night."

Dr. Rainer Kolb, Hunter.

Our latest Nighthunter_{xp} models, which have been jointly developed together with hunters from all over the world, have managed to increase their lead in recent years. The legendary light transmission of our night time binoculars Nighthunter_{xp} 8x56 guarantees delighted customers and the newly developed Nighthunter_{xp} 8x44 and 10x44 also enjoy great success worldwide – thanks to their unique combination of professional optics and the Comfort Balance System.

We have also extended our product range by adding the Ranger_{pro} models, which set new standards in their price segment. They combine the outstanding quality of roof prism binoculars with an attractive price. At the same time they offer product innovations revolving around our premium optics coupled with an extremely rugged design and user-friendly comfort. The Ranger_{pro} models make reliable and easy to handle companions for all professional hunters.

All binoculars in our Hunting range feature the legendary STEINER ruggedness and a non-slip grip however severe the weather conditions may be. This ensures you will be ideally equipped no matter how you are hunting, be it stalking, still hunting or flushing out prey.

STEINER binoculars for observing nature, animals and birds.

Focusing on your passion.

“Every year millions of birds set off once more on an adventurous trip to their breeding grounds in the northern hemisphere: an unforgettable spectacle in the world of nature. Bird-watchers all over the globe are thrilled when they catch sight of the first Swallow, White Stork or Great Reed Warblers of the season.

In spring it is exciting to wait on the beach until you see ducks off the coastline sweep over the waves to the north. The smaller birds, which initially only appear as tiny dots in the sky, immediately seek firm ground to rest there and gather their strength for the remaining journey.

When you realise the distances that these birds cover, battling against stormy weather and dry seasons, you can only admire the resilience of these creatures. Nowadays we are able to closely observe every aspect of their behaviour and appearance thanks to the latest innovations in optics.

STEINER are the world’s leading manufacturers of binoculars for observing nature, animals and birds because the company has specialized in developing binoculars for these specific purposes. This specialization allows me to identify unbelievable details with the top models of the Discovery range, no matter what the situation.

Spotting birds in woodlands is a major challenge for any binoculars. But this isn’t a problem with the wide field of view of the Discovery. These binoculars reproduce true colours as well as brilliant, razor-sharp images, even in twilight or in murky undergrowth. I can even see the difference in colour between the Common Wood Warbler and the European Willow Warbler, as well as the delicate shades of a flock of long-tailed Tits vanishing into the undergrowth.

A unique feature is the ergonomic eyecup system: these are folded over to simply eliminate diffused light from the side. I can always rely on my STEINER binoculars, even in extreme differences in temperature or very severe weather conditions. They are fog and water pressure proof up to 5 metres, making them ideal for use outdoors.

On long bird-watching trips the special comfort of these birding binoculars comes into its own. The lightweight magnesium housing, the well-balanced ergonomic shape and the rubber armoring are particularly important to ensure I won’t become tired or uncomfortable. Despite their minimal weight, all binoculars feature STEINER’s legendary rugged design, something that is borne out by the 30 year warranty. I’m sure that I will be able to use my STEINER binoculars for many years to come providing me with unforgettable bird-watching experiences.

Rodney Zanipattini, Birdwatching Guide.

STEINER Outdoor binoculars.

Powerful. Built for explorers.

The Binocular-Specialists!

STEINER 
GERMANY

"As a professional tour guide working in South and Central America I constantly visit different ecosystems: from tropical rain forests in the lowlands of the Amazon to the icy peaks of the Andes or the driest deserts of our planet. My STEINER Wildlife has become an indispensable part of my equipment. Even when reconnoitring routes for climbing at altitudes of 5.000 m, I can rely on my STEINER binoculars with their high-contrast images, razor-sharp focus, and compact and easy to handle design.

I am especially fascinated by the wildlife inhabiting the rain forests. Here I benefit from the excellent results, when observing animals and nature. The natural colour reproduction and the bright, high-contrast optics are truly impressive. They are essential for identifying the different species properly. The quick Fast-Close focusing mechanism makes it easier to identify birds in flight. The extreme climate conditions in the rain forest call for rugged binoculars that are waterproof as well as resistant to high temperatures and fogging. This is absolutely no problem for my STEINER binoculars. The result: I won't go on a trip without my Wildlife. It is my reliable companion and allows me to really enjoy myself when working in nature."

Mike Sauer, Tour Guide.

Small but powerful. This is how you could describe our objectives when first considering how to design binoculars that are ideally suited for outdoor applications.

As the perfect travel companion, these binoculars have to be very compact in design: they should easily fit into a jacket pocket or a glove compartment to make sure they would be available for use at any moment. Bulky or particularly heavy binoculars would be the last things required in this context.

But true outdoor binoculars have to offer additional important features: they include fast focusing to ensure a perfect viewing experience as well as the extremely rugged design which has made STEINER binoculars so incomparable. This ruggedness also explains how we can offer warranties between 10 and 30 years on our Outdoor models.

We do, however, not just want to provide you with first-class Outdoor binoculars, but also do help nature and do much as possible to protect it. By purchasing any model from the Wildlife[®] Pro or Wildlife[®] range, you will also be supporting the work of the WWF.

STEINER – Technical expertise that is unparalleled throughout the world.

STEINER binoculars stand for the latest technology, outstanding optical performance and professional world-class workmanship. An uncompromising approach to quality considerations during the development and manufacture of our outstanding products has always guaranteed our position as global market leaders. In-depth understanding of applications in the field and years of co-operation with users all over the world make STEINER the experts for marine and outdoor applications as well as hunting, bird-watching and nature observation. The focus here majors on three quality parameters:

1. Ruggedness – because precision calls for protection.

STEINER's legendary ruggedness ensures absolute reliability even under the most gruelling conditions. Compact size, construction and design are specifically geared to the individual application. This ruggedness has been the hallmark of STEINER's products for over 60 years.

Innovations that make our binoculars extremely robust:

- Nitrogen Pressure System with 2-way valve technology to prevent fogging or the formation of condensation inside the binoculars. This protects the valuable optics over decades.
- Special sealing technology guarantees the binoculars are water pressure proof up to 2 respectively 10 metres. Dirt or moisture cannot get into the binoculars.
- The high-tech Makrolon® or magnesium housings and the floating prism mountings are making our binoculars shockproof and thus extremely robust.

2. Precision optics – for unique brilliance of vision.

Unmatched performance and precision optics are at the heart of all STEINER binoculars. Top experts around the globe are constantly working on new ideas to enhance the optical designs. The result: unique and precise observations with our binoculars.

Innovations that ensure top-quality optics:

- Our high-performance optics ensure the very best results under all possible lighting conditions. Clear, bright and brilliant images are guaranteed thanks to outstanding light transmission, high colour contrast, first-class image resolution, marginal sharpness as well as the minimization of negative effects such as light scatter, colour fringing and distortion. This superlative quality is rounded off by special upgrading technologies.
- Precise focusing systems offer the right system for every application, from detailed close-ups to infinity.
- Nano-Protection® provides unbeatable clear vision thanks to the dirt and water-repellent finish on our lenses.
- STEINER's illuminated and specially stabilised compass integrated into the binoculars is the biggest available on the market.

Ruggedness, reliability, durability and highest optical performance are our key-considerations.

The Binocular-Specialists!

STEINER 
GERMANY

3. Ergonomic comfort meets perfection.

STEINER binoculars offer a unique combination of perfect technology and ergonomic operating comfort. Users will enjoy their binoculars even more if they are easy to handle and light to carry.

Innovations that make our binoculars so convenient to use:

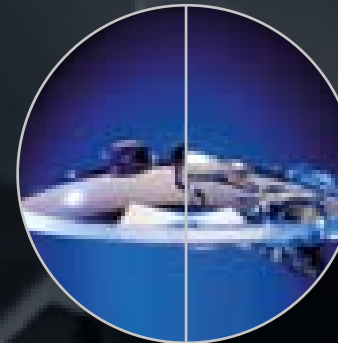

- The STEINER EyeCup System for optimising observations. Stray light from the side is eliminated. Wearers of glasses enjoy maximum comfort due to especially developed systems.
- A high level of comfort in handling is achieved due to clever ergonomic features such as Softgrips, Thumb grips and many other benefits.
- The product range is rounded off by carefully designed accessories supplied as standard, e.g. lens covers, ClicLoc changeable EyeCups, the ClicLoc Strap System for fast detachment and the Memory-Ocular.

All materials employed are of top-quality, are carefully assembled and their finishes are kind to the skin. For example, the NBR-Longlife rubber armouring, which stands up to the most extreme conditions such as cold, heat, salt water, oil and acid.

Highlights from previous years which have ensured that our binoculars are among the best in the world:
